New Resolutions

Firstly, wishing all our avid readers a very happy New Year!!

It's that time of the year to make new resolutions. Obviously, all of us wish to make big ones, right ? Wrong!

Atleast not the Sonar manufacturers. For them, resolutions are kept "smaller the better"!!

In our September issue, we had announced the beginning of our proud association with the world-class manufacturer of 2D and 3D Scanning sonars, Teledyne Blueview. In this issue, we discuss the product range in detail.

With over 500 systems operating world-wide, the Teledyne Blueview range caters for the most wide range of applications no other manufacturer can boast of. Employing revolutionary techniques like Multiple overlapping scans to create mosaic images of large structures or areas, compatible with available CAD systems, Teledyne Blueview manufactures, and understands the user's requirements, both of these defined by one word.....precisely!

In this issue...

Teledyne Blueview – 2D & 3D scanning sonars

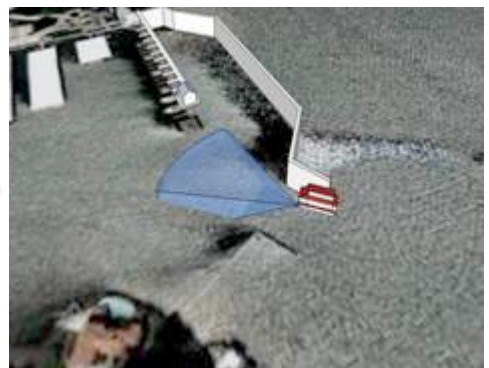

Teledyne Blueview product range & applications

Tech Tips

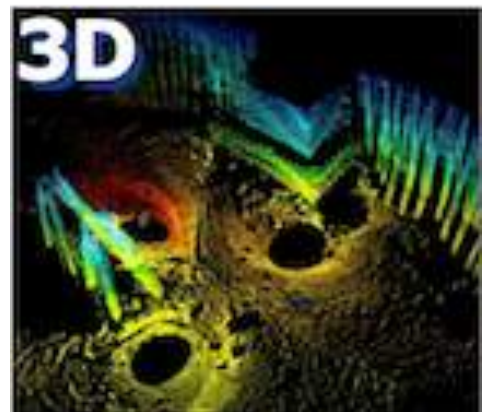

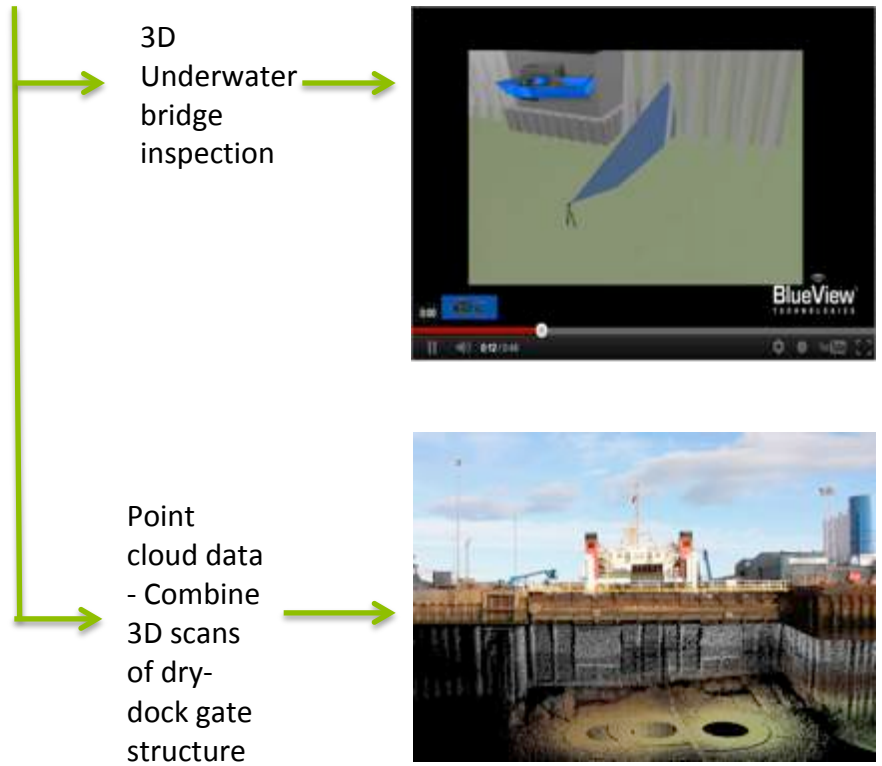

The Computer Carol – For PC troubleshooting

Customer satisfaction is our prime objective

BlueView delivers mission critical instruments for underwater navigation, monitoring, survey, and detection. BlueViewTechnologies' advanced sonar systems are deployed on AUVs, ROVs, surface vessels, fixed positions, and portable platforms, and have been adopted by leading manufacturers and service providers to support mission critical operations.

Truly integrable with every platform: Diverheld, Tripod, ROV, AUV, Vessel mount and Structure mount.

Scan, view, register multiple 3D scans, and generate CAD compatible models using an integrated software system.

Teledyne Blueview technologies is capable of catering to every sector viz. Navy, Coast guard, Offshore, Dam maintenance and Inland waterways.

Do visit www.blueview.com, or contact us for more details!

Tech Tips

Computer Carol!

*When the PC doesn't boot, and no-one gives a hoot,
You gotta follow these steps, In order to get success....
First things first, as silly as it may sound,
It is important, to start off from the ground!
When the PC goes dead, without any hesitation,
Jump to the rear, & check for a loose connection!
When it does come alive, but only makes a sound,
RAM could be the culprit, and your belief, profound!
The heart says it will work....its not yet charred,
All it could be, could be just a loose card!
When all is done, and logic doesn't apply,
Don't miss this one, it could be the power supply!
If not all of this, its time to go overboard,
Grab the tool-kit, and check the Motherboard!
There you go, you got your man,
Happy and running, as best as you can,
There's always a way, there's always a "somehow",
Bravo you Engineer, its time you took a Bow!*
